

Additional Gas System Enhancements Underway

January 19, 2018

SYLMAR, Calif. (Jan. 19, 2018) – The Sunshine Canyon Landfill team reported earlier this month that in 2018 we remain committed to long-term success by continuing to build on the progress we made in 2017. One of the areas on which we are focused is optimizing and expanding our landfill gas system with dozens of new gas wells and supporting infrastructure. Last week we began installing 26 new vertical landfill gas wells at Sunshine Canyon.

To ensure these new wells are effectively collecting landfill gas, we will install pumps and conveyance pipes where appropriate so that landfill liquids do not impact their performance. The team is also installing a series of horizontal gas collectors at the active waste disposal area to further promote landfill gas collection and control. These enhancements will assist our ongoing efforts to collect and control landfill gas as a responsible operator and good neighbor. We will keep you updated as we make progress in the coming weeks.
