

Landfill Gas Enhancements Progressing

February 2, 2018

SYLMAR, Calif. (Feb. 2, 2018) – The Sunshine Canyon Landfill team continues to make landfill gas system enhancements at the facility. Today the team announced additional progress on horizontal gas collector installation in the current disposal cell. Three of the seven planned collectors have been installed and are already extracting landfill gas. The remaining four collectors will be installed and operational in the coming weeks. New vertical gas wells are also being drilled up to 250 feet deep, allowing removal of gas through everywhere it is being produced.
