

Landfill Gas System Expansion and Optimization On Track

March 2, 2018

SYLMAR, Calif. (Mar. 2, 2018) – In January, the Sunshine Canyon Landfill team announced plans to expand and optimize the site's landfill gas system in 2018. The team promptly began the installation of 26 new landfill gas collection wells, and has already completed the installation of 11 wells. The remaining 15 landfill gas collection wells will be completed this spring. The expanded and optimized landfill gas collection system will further enhance odor control capabilities at the site.

In addition, the Landfill team previously reported on the installation of landfill gas system support infrastructure, including horizontal gas wells and liquid extraction pumps. Since then, the team has installed seven horizontal gas wells in the active disposal area, as well as the ongoing installation of pumps to further optimize new and existing gas infrastructure.

Your feedback on our progress is important to us. Should you have any questions, please contact the Landfill team at sunshinecanyon@republicservices.com or visit us online at <http://sunshinecanyonlandfill.com/> to learn more.
