

Landfill Gas Project Passes Halfway Mark

March 16, 2018

SYLMAR, Calif. (March 16, 2018) – In January, the Sunshine Canyon Landfill team began installing 26 new landfill gas wells, as we continue to optimize and expand our landfill gas system. This week we passed the halfway mark and installed the 14th gas well of this project. An additional drill rig will soon arrive on-site to help accelerate this work.

Along with the new landfill gas wells, this week we also finalized our design for supporting infrastructure in the new disposal cell. We anticipate beginning construction on this project in the coming weeks. We also will begin a gas header enhancement project to provide additional gas system vacuum to increase gas flow and collection.
