

Plans for Additional Closure Turf Installation Underway

May 11, 2018

SYLMAR, Calif. (May 11, 2018) – In 2017, the Sunshine Canyon Landfill team took multiple steps to enhance our landfill gas collection and control system. Along with adding or replacing more than 150 gas wells and installing more than 250 pumps in gas wells to improve gas well performance, the Landfill team also installed 21 acres of closure turf, an impermeable synthetic liner overlain by artificial turf, to complement other landfill gas system improvements.

In 2018, we are planning to install a second phase of closure turf over four additional acres of the Landfill. Our team expects to complete the design phase of the closure turf project this month and begin construction in June. Once fully installed, the closure turf will serve as additional support for our landfill gas system, as we work to further optimize and enhance the system this year. We will keep you updated on our progress.
