

## Reusing and Recycling at Sunshine Canyon

June 1, 2018

**SYLMAR, Calif. (June 1, 2018)** – Modern-day landfills require continuous construction and development as new waste cells are built and gas infrastructure is installed. At Sunshine Canyon, as we develop the Landfill, we collect and stockpile extra soil and concrete from previous construction events. Rather than disposing of these materials, because of our commitment to environmentally responsible and sustainable operations, we reuse them on the site. We use collected soil for waste cover and other projects, and we repurpose crushed concrete for internal road base and wet weather preparations. This year we crushed 40,000 tons of concrete over a two-month period, while vigilantly suppressing dust and following regulatory requirements, This material will last us an entire year as we continue site developments.
