

Our Continued Commitment to Landfill Gas System Enhancements

July 27, 2018

SYLMAR, Calif. (July 27, 2018) – As we began reporting last year, the Sunshine Canyon Landfill team has made significant enhancements to our landfill gas collection and control system. In 2017, we added or replaced 153 gas wells and installed 253 pumps to remove trapped leachate from the wells and ensure proper gas well operation.

The enhancements we made in 2017 yielded positive results, and we have maintained these efforts this year. Since 2017, we have added or replaced more than 250 landfill gas wells and installed 270 pumps at the facility, as we optimize the gas collection and control system to safely and effectively manage landfill gas. We remain committed to responsible landfill operations, and we will continue to evaluate opportunities to further invest in landfill gas collection and control at Sunshine Canyon.
