

Additional Landfill Gas System Enhancements Underway

December 7, 2018

SYLMAR, Calif. (Dec. 7, 2018) – The Sunshine Canyon Landfill team announced this week additional landfill gas collection and control system enhancements. A project recently initiated will relocate 40 gas wellheads from the active disposal area to a manifold system located away from the disposal area. The objectives of this project are to preserve the integrity of the gas infrastructure for continued operation and provide safe and easy access for our technicians to tune the wellheads for optimal gas collection in the disposal area during filling operations. When completed, this will also create additional unobstructed space at the disposal area to further support safe and efficient landfill operations.
